ABSTRACT

Background: *One of the things that plays an important role in the success of contraceptive use, including progestin injection family planning, is the knowledge and attitude of the acceptor towards the side effects of the contraceptive used. Good knowledge of acceptors and positive attitudes of prospective acceptors related to the use of contraceptives*

Objective: *To determine the relationship between the level of knowledge and attitudes of acceptors on readiness to face the side effects of progestin injection contraception at Kemiri Health Center in 2021.*

Methods: *This type of research is an analytic survey with a cross sectional approach. The population in this study were all mothers who were acceptors of active progestin injection at the Kemiri Health Center. with a sample of 64 people. The data collection instrument is a questionnaire. Data analysis using univariate (percentage) and bivariate (chi square) analysis*

Result: *The level of knowledge of the acceptors about the side effects of progestin injection contraception at the Kemiri Besar Besar Public Health Center is sufficient.2. The attitude of the acceptors in dealing with the side effects of progestin injection contraception at the Kemiri Health Center is mostly supportive 3. Most of the acceptors at the Kemiri Health Center in 2021 are ready to face the side effects of the progestin injection KB 2021 year.*

Conclusion: *There is a relationship between knowledge and attitudes of acceptors on readiness to face the side effects of progestin injection contraceptives*

Keywords: *Knowledge, Attitude, Readiness of Progestin Injection KB*
