Latar Belakang:Kekurangan nutrisi jangka waktu lama dapat berakibat pada kejadian anemia defisiensi besi. Anemia defisiensi besi merupakan kondisi tidak cukupnya cadangan zat besi sehingga terjadi kekurangan penyaluran zat besi ke jaringan dalam tubuh. Anemia pada remaja dapat berdampak terhadap gangguan pertumbuhan serta gangguan kinerja fisik dan kognitif.Anemia pada remaja dapat diatasi dengan terpenuhinya masalah gizi yaitu meningkatkan asupan zat besi dalam makanan sehari-hari. Pentingnya perilaku pencegahan anemia dalam jangka panjang sepertipendampingan konsumsi fe, perilaku diet dan evaluasi status gizi untuk memperbaiki resiko anemia.

Tujuan:Mengetahui Gambaran Pencegahan Anemia Remaja Putri di Asrama Kebidanan Poltekkes Kemenkes Yogyakarta Tahun 2022

ABSTRACT

Background: Long-term nutritional deficiencies can result in the incidence of iron deficiency anemia. Iron deficiency anemia is a condition where there is not enough iron reserves so that there is a lack of iron delivery to tissues in the body. Anemia in adolescents can have an impact on growth disorders and impaired physical and cognitive performance. Anemia in adolescents can be overcome by fulfilling nutritional problems, namely increasing iron intake in daily food. The importance of anemia prevention behavior in the long term such as facilitation of iron consumption, dietary behavior and evaluation of nutritional status to improve the risk of anemia
