**ABSTRACT**

**Background :** Based on the preliminary study that has been carried out, it was found that at the Gamping Health Center no one used the post-placental IUD from 707 mothers who gave birth. So the researchers wanted to know the level of knowledge of pregnant women about post-placental IUD contraception at the Gamping 2 Health Center in 2022.

**Objective :** To determine the level of knowledge about post-placental IUD contraception based on the characteristics of pregnant women at the Gamping II Health Center in 2022.

**Method :** This type of research is survey (observational). ). The research subjects were 31 pregnant women. The study was conducted at the Gamping 2 Health Center from June 3 to June 11, 2022. Data collection was carried out using a questionnaire.

**Results :** The level of knowledge about post-placental IUD contraception is mostly 18 people (58.1%). The average age of the mother is 20-35 years, 26 people (83.9%), secondary education level 15 people (48.4%). Types of information sources from other health workers 12 people (38.7%). The majority of pregnant women do not have a job 19 people (61.3%) and the amount of income in the household is low (< Rp1,840,000) 17 people (54.8%).

**Conclusion:** The level of knowledge of pregnant women about post-placental IUD contraception at the Gamping II Health Center, that in general the knowledge of most pregnant women can be categorized as sufficient.

Keywords : Knowledge Level, Post-placental IUD

**KARAKTERISTIK DAN TINGKAT PENGETAHUAN  
TENTANG KONTRASEPSI IUD PASCA PLASENTA PADA  
IBU HAMIL DI PUSKESMAS GAMPING II TAHUN 2022**

**INTISARI**

**Latar Belakang** : Berdasarkan studi pendahuluan yang telah dilakukan didapatkan hasil di Puskesmas Gamping tidak ada yang menggunakan IUD pasca plasenta dari 707 ibu bersalin. Sehingga peneliti ingin mengetahui tingkat pengetahuan ibu hamil tentang kontrasepsi IUD pasca plasenta di Puskesmas Gamping 2 tahun 2022.

**Tujuan** : Mengetahui tingkat pengetahuan tentang kontrasepsi IUD pasca plasenta berdasarkan karakteristik ibu hamil di Puskesmas Gamping II tahun 2022.

**Metode** : Jenis penelitian ini adalah survey (observasional). Subyek penelitian sebanyak 31 ibu hamil. Penelitian dilakukan di Puskesmas Gamping 2 dari tanggal 3 Juni hingga 11 Juni 2022. Pengambilan data dilakukan menggunakan kuesioner.

**Hasil** : Tingkat pengetahuan mengenai kontrasepsi IUD pasca plasenta mayoritas berpengetahuan cukup 18 orang (58,1%). Umur ibu rata-rata 20-35 tahun 26 orang (83,9%), tingkat pendidikan menengah 15 orang (48,4%). Jenis sumber informasi dari tenaga kesehatan lainnya 12 orang (38,7%). Mayoritas ibu hamil tidak memiliki pekerjaan 19 orang (61,3%) dan jumlah penghasilan dalam rumah tangga termasuk rendah (< Rp1.840.000) 17 orang (54,8%).

**Kesimpulan** : Tingkat pengetahuan ibu hamil tentang kontrasepsi IUD pasca placenta di Puskesmas Gamping II , bahwa secara umum pengetahuan ibu hamil sebagian besar dapat dikategorikan cukup.

**Kata kunci** : Tingkat Pengetahuan, IUD pasca placenta
