ABSTRAK

Latar Belakang: Menurut BKKBN, implan merupakan salah satu strategi pelayanan KB untuk percepatan penurunan angka *Total Fertility Rate (TFR)* di Indonesia. Pemilihan kontrasepsi implan dipengaruhi oleh pengetahuan wanita usia subur. Pengetahuan digunakan untuk membantu mengenal macam-macam kontrasepsi yang memadai sehingga dapat menentukan pilihan dalam ber-KB secara tepat.

Tujuan: Diketuinya Gambaran Pengetahuan Wanita Usia Subur (WUS) tentang Kontrasepsi Implan di Kalurahan Purwomartani, Kapanewon Kalasan, Kabupaten Sleman Tahun 2022.

Metode: Penelitian ini merupakan penelitian deskriptif dengan menggunakan desain *cross sectional*. Subjek dalam penelitian ini adalah wanita usia subur (wus) yang memakai kontrasepsi implan dan bersedia menjadi responden penelitian yang dilaksanakan sejak 29 Maret 2022 sampai 26 Mei 2022 yang berjumlah 60 responden. Analisis data dalam penelitian ini adalah analisis data univariat.

Hasil: Hasil penelitian menunjukkan bahwa berdasarkan tingkat pengetahuan WUS tentang kontrasepsi implan di kategorikan tingkat pengetahuan kurang 20 responden (33,3%), cukup 35 responden (58,3%), dan baik 5 responden (8,3%). Berdasarkan karakteristik responden sebagian besar merupakan WUS berumur >35 tahun sebanyak 47 responden (78,3%), pendidikan responden terakhir rata-rata adalah tingkat SMA sebanyak 30 responden (50,0%), pekerjaan responden sebagian besar merupakan ibu rumah tangga sebanyak 38 responden (63,3%).

Kesimpulan: Berdasarkan penelitian yang telah dilakukan menunjukkan bahwa pengetahuan WUS tentang kontrasepsi implan di Kalurahan Purwomartani sebagian besar responden mempunyai pengetahuan cukup sebanyak 35 responden (58,3%).

Kata Kunci: Pengetahuan, Wanita Usia Subur (WUS), Kontrasepsi Implan

**DESCRIPTION OF KNOWLEDGE OF WOMEN OF CHILDBEARING
AGE (WCBA) ABOUT IMPLANT CONTRACEPTION IN
PURWOMARTANI URBAN VILLAGE, KALASAN SUB-DISTRICT,
SLEMAN REGENCY IN 2022**

ABSTRACT

Background: According to National Family Planning Coordinating Board, implants are one of the family planning service strategies to accelerate the reduction in the Total Fertility Rate (TFR) in Indonesia. The choice of implant contraception is influenced by the knowledge of women of childbearing age. Knowledge is used to help identify adequate types of contraception so that they can make appropriate choices for family planning.

Objective: To know the description of the knowledge of women of childbearing age (WCBA) about implant contraception in Purwomartani Urban Village, Kalasan Sub-District, Sleman Regency in 2022.

Methods: This research is a descriptive study using a cross-sectional design. The subjects in this study were women of childbearing age (WUS) who used implant contraception and were willing to be respondents in research conducted from March 29, 2022, to May 26, 2022, totaling 60 respondents. Data analysis in this study is univariate data analysis.

Results: The results showed that, based on the level of knowledge of WCBA about implant contraception, 20 respondents (33.3%). Based on the characteristics of the respondents, most of them are WUS aged > 35 years old, as many as 47 respondents (78.3%), the average education of the last respondent is at high school level, and as many as 30 respondents (50.0%), most of the respondents' occupations are housewives, as many as 38 respondents (63.3%).

Conclusion: Based on the research that has been done, it shows that the knowledge of WCBA about implant contraception in Purwomartani Urban Village, most of the respondents have sufficient knowledge, as many as 35 respondents (58.3%).
