ABSTRAK

Latar Belakang: Dalam rangka pemerataan penduduk pemerintah mencanangkan beberapa upaya salah satunya program keluarga berencana. Namun saat pandemi COVID-19 berlangsung, peserta KB aktif justru mengalami penurunan, Puskesmas Godean II menjadi salah satu puskesmas yang mengalami penurunan sebesar 78,8% melampaui target Resentra (Rencana Strategis) tahun 2020 yaitu sebesar 83%. Terjadinya penurunan pengguna kontrasepsi dapat dipengaruhi oleh faktor Pengetahuan dan sikap sehingga akan mempermudah terjadinya perilaku sehat, hal tersebut menjadikan dasar bagi peneliti untuk mengetahui lebih dalam tentang tingkat pengetahuan dan sikap ibu Pasangan Usia Subur (PUS) pada masa pandemi COVID-19

Tujuan: Mengetahui hubungan tingkat pengetahuan dan sikap ibu Pasangan Usia Subur (PUS) dengan penggunaan kontrasepsi pada masa pandemi COVID-19

Metode: Jenis penelitian analitik observasional dengan desain *cross sectional* kepada 53 responden secara *accidental sampling* dan menggunakan Uji *Chi-Square*.

Hasil: Hasil uji *chi square* tingkat pengetahuan diperoleh *p-value* $0,046 < 0,05$ sedangkan sikap *p-value* $0,017 < 0,05$

Kesimpulan: Ada hubungan antara tingkat pengetahuan dan sikap dengan penggunaan kontrasepsi

Kata Kunci: Tingkat Pengetahuan, Sikap, Pasangan Usia Subur, Kontrasepsi, COVID-19

*KNOWLEDGE LEVEL AND ATTITUDE RELATIONSHIP MOTHER OF
FERTILIZED COUPLES WITH CONTRACEPTION USE DURING
THE COVID-19 PANDEMIC AT PUBLIC HEALTH CENTER

ABSTRACT

Background: *In order to equalize the population, the government has launched several efforts, one of which is the family planning program. However, during the COVID-19 pandemic, active family planning participants actually decreased, the Godean II Health Center became one of the health centers that experienced a decline of 78.8%, exceeding the 2020 Resentra (Strategic Plan) target of 83%. The decline in contraceptive users can be influenced by knowledge and attitudes factors so that it will facilitate healthy behavior, this makes the basis for researchers to find out more about the level of knowledge and attitudes of mothers of fertile age couples (EFA) during the COVID-19 pandemic.*

Objective: *To determine the relationship between the level of knowledge and attitudes of women of childbearing age with the use of contraception during the COVID-19 pandemic*

Methods: *Observational analytic research with cross sectional design to 53 respondents by accidental sampling and using Chi-Square Test.*

Results: *The results of the chi square test of knowledge level obtained p-value 0.046 <0.05 while attitude p-value 0.017 <0.05*

Conclusion: *There is a relationship between the level of knowledge and attitudes with contraceptive use*
