ABSTRAK

Latar Belakang: Pencabutan gigi adalah kegiatan menghilangkan gigi dari socketnya, kehilangan gigi dapat mengakibatkan terganggunya beberapa fungsi, yakni fungsi pengunyahan, bicara, dan estetik. Akibat adanya dampak yang ditimbulkan maka seharusnya gigi yang hilang diganti dengan gigi tiruan

Tujuan Penelitian: Penelitian ini bertujuan untuk mengetahui hubungan Pencabutan gigi tetap dengan minat pasien menggunakan gigi tiruan di Klinik Gigi Swasta Yogyakarta.

Metode Penelitian: Jenis penelitian ini menggunakan metode penelitian survey analitik dengan melakukan pendekatan rancangan *survey cross sectional*. Populasi meliputi pasien pasca pencabutan di Klinik Gigi Swasta Yogyakarta. Sampel penelitian sebanyak 50 responden diambil dengan teknik *total sampling*. Pengambilan data dengan cara mengisi informed consent, kemudian mengisi 2 kuesioner, yaitu kuesioner minat menggunakan gigi tiruan.

Hasil Penelitian: Hasil penelitian menunjukkan responden yang melakukan pencabutan gigi banyak ≥ 2 mempunyai minat tinggi memakai gigi tiruan yaitu sebesar 50%. Analisis data diuji dengan uji *Kendall's-Tau* didapatkan hasil nilai signifikansi $p = 0,000$.

Kesimpulan: Terdapat hubungan antara pencabutan gigi dengan minat pasien menggunakan gigi tiruan.

Kata Kunci: Pencabutan gigi tetap, minat menggunakan gigi tiruan.

The Correlation Between Permanent Tooth Extraction and The Patient's Interest In Using Dentures

ABSTRAK

Background: Tooth extraction is an activity to remove teeth from their sockets, tooth loss can result in disruption of several functions, namely mastication, speech, and aesthetic functions. Due to the impact, the missing teeth should be replaced with dentures.

Research purpose: This study aims to determine the relationship between permanent tooth extraction and the patient's interest in using dentures at the Yogyakarta Private Dental Clinic.

Research Methods: This type of research uses an analytical survey research method with a cross sectional survey design approach. The population includes post-extraction patients at the Yogyakarta Private Dental Clinic. The research sample of 50 respondents was taken by total sampling technique. Data were collected by filling out the informed consent, then filling out 2 questionnaires, namely the interest questionnaire using dentures.

Research Results: The results showed that respondents who performed multiple tooth extractions 2 had a high interest in using dentures, which was 50%. Data analysis was tested with the Kendall's-Tau test, the results obtained a significance value of $p = 0.000$.

Conclusion: There is a relationship between tooth extraction and the patient's interest in using dentures.

Keyword: Permanent tooth extraction, Interest in using dentures.
