ABSTRACT

Background : High maternal mortality rate had been a serious issue to the health service in Indonesia. Post-delivery birth control service was one of the methods applied by the government to lower the mortality rate in Indonesia by encouraging contraceptives as soon as the labor period finished, to prevent the incidence of pregnancy risk. The coverage of post-delivery birth control in Indonesia according to the health service profile data in 2021 was 40.4% while the 2024 target was on 70 %. Husband support was a form of a social support that would strengthen mother in taking decision to choose contraception.

Research objectives: To describe the correlation between husband support with mother participation in using post placental IUD on post-delivery birth control at the Hj. Anna Lasmanah Hospital Banjarnegara.

Research method : The study applied observational analytic type with cross sectional design. The study population covered entire postpartum mother at Hj. Anna Lasmanah Hospital on the February 2023 with 96 sample, was taken with purposive sampling technique. Instrument study used was the questionnaire form. The data analysis applied was the chi-square.

Research Results: The study resulted that most respondents range were 20-35 years, had basic education level, were not working, parity level was < 3 children, did not get support from husbands at 62.5%, and postplacental IUD participation was 27.1%. The results of bivariate analysis showed a correlation between husband support and postpartum birth control participation in post-placental IUD postpartum, with a p-value of $0.000 \leq \alpha = 0.05$, Prevalence Ratio 4,524. The informational, emotional and assessment components of husband support were significantly correlated with participation in post-placental IUD postpartum birth control.

Conclusion: There was significant correlation between husband support with post-placenta IUD on post-delivery contraception participation at the Hj. Anna Lasmanah Hospital.

Keywords: husband support, family planning , post-placental IUD

**HUBUNGAN DUKUNGAN SUAMI DENGAN KEIKUTSERTAAN
KB PASCA SALIN IUD *POST PLACENTA*
DI RSUD HJ. ANNA LASMANAH
