INTISARI

Latar belakang: *Congestive Heart Failure* (CHF) adalah suatu gangguan fungsi jantung yang mengalami kegagalan dalam memompa darah untuk kebutuhan sel-sel tubuh. Gejala yang sering timbul karena penyakit gagal jantung ini adalah *dyspnea* atau sesak nafas menyebabkan pola nafas pasien menjadi tidak efektif.

Tujuan: Memberikan gambaran tentang pemberian oksigen dalam asuhan keperawatan pada pasien *Congestive Heart Failure* (CHF) dengan gangguan kebutuhan oksigenasi

Metode: Studi kasus ini menggunakan metode diskriptif. Penulis membandingkan respon dua pasien CHF yang sama-sama diberi tambahan oksigen. Pengumpulan data dilakukan dengan cara wawancara, observasi, pemeriksaan fisik, dan studi dokumen

Hasil: Penerapan pemberian oksigen pada pasien *Congestive Heart Failure* (CHF) dengan gangguan kebutuhan oksigenasi memberikan pengaruh terhadap keefektifan pola napas pada pasien. Perbedaan respon pada dua pasien setelah diberi tindakan dikarenakan kedua pasien mempunyai keluhan sesak napas yang berbeda dan penyakit kronis lain yang berpengaruh terhadap pola napas pasien.

Kesimpulan: Penerapan pemberian oksigen pada pasien CHF memberikan respon yang berbeda

Kata Kunci : Pemberian oksigen, *Congestive Heart Failure* (CHF), gangguan oksigenasi, pola napas tidak efektif

ABSTRACT

Background: Congestive Heart Failure (CHF) is a disorder of heart function that fails to pump blood for the needs of body cells. Symptoms that often arise because of heart failure is dyspnea or shortness of breath causes the patient's breath pattern to be ineffective.

Purpose: Provides an overview of oxygen giving in nursing care in Congestive Heart Failure (CHF) patients with disruption of oxygenation needs

Method: This case study uses a descriptive method. The authors compared the responses of two CHF patients who were equally given oxygen supplementation. Data collected by interview, observation, physical examination, and document study

Results: The application of oxygen giving in Congestive Heart Failure (CHF) patients with disruption of oxygenation needs has an effect on the effectiveness of respiratory pattern in patients. Different responses in two patients after treatment were given because both patients had different respiratory complaints and other chronic diseases that affect the patient's breathing patterns.

Conclusions: The application of oxygen giving to CHF patients gave different responses

Keywords: Giving oxygen, Congestive Heart Failure (CHF), disruption of oxygenation, ineffective breathing pattern
