Background: Mental disorders are quite serious health problems because the number of illnesses continues to increase, especially schizophrenia. Schizophrenia has negative and positive symptoms and one of the positive symptoms is hallucinations. Hallucinations are one of the symptoms of mental disorders in which patients experience changes in sensory perception. The hallucinations that most often appear in severe mental disorders are auditory hallucinations. The nursing action that can be given is using voice speaking therapy. Talking with voice is a therapy that involves engaging dialogue with auditory hallucinations with several stages that must be passed based on what the patient experiences

Objective: Carrying out the nursing care process with a focus on applying talking with voice therapy to two patients with nursing problems of sensory perception disorders: auditory hallucinations at Wisma Arjuna RSJ Grhasia.

Method: The method used is a case study conducted on two patients with sensory perception disorders, auditory hallucinations, using a nursing process approach that focuses on the application of talking with voice therapy at RSJ Grhasia.

Conclusion: The results of the case study show that the application of talking with voice therapy in nursing care is able to reduce the frequency of hallucinations in patients with sensory perception disorders, auditory hallucinations.

Keywords: Schizophrenia, Auditory hallucinations, talking with voice therapy

PENERAPAN TERAPI *TALKING WITH VOICE* PADA PASIEN DENGAN GANGGUAN PERSEPSI SENSORI HALUSINASI PENDENGARAN DI WISMA ARJUNA RSJ GRHASIA YOGYAKARTA
