Keynote Speaker

I-01 Role of Regional Head in Order to Successful Community Movement
      Health Living on Adolescent
      Dra. Hj. Sri Muslimatun, M.Kes (Indonesia)........................................................................1

I-02 Health Ministry's Policy to Improve Adolescent Health in The Era of
      SDGs
      drg. Usman Sumantri, M.Sc (Indonesia)............................................................................2

I-03 Climate Change and The Health Consequences in The Population
      Prof. Dr. Tengku Mohammad Ariff R. Husein (Malaysia)..................................................3

I-04 Overview for The Policy and Support of Government of Thailand
      Prof Assoc. Prof. Patcharee Jearanaikoon, PhD (Thailand).............................................4

I-05 HIV Testing in Laboratory and Community to Detect Carrier Among
      Adolescence Immediately
      Assistant Prof. Amonrat Jumnainsong, PhD (Thailand)....................................................5

I-06 Mental Health Detection in Teenagers

I-07 Youth Marriage on Reproductive Health
      Dr. Yuni Kusmiyati, SST.,MPH (Indonesia).................................................................7

I-08 Hormonal Changes in Tissue Periodontium in Adolescents
      Dr. drg. Dahlia Herawati, SU.,Sp.Perio (K) (Indonesia)...............................................8

I-09 Improving Child Nutrition Literacy For Teenage Pregnant Women And Its
      Implication To The First 1000 Days Of Child Life: Arguments For
      Developing Social Media Based Adolescent Support Group In Indonesia
      Dr Dr. Mubasyisyr Hasan Basri, MA (Indonesia).........................................................9
Oral Presentation

O-01 Identifying the Role of Hemoglobin in Intradialytic Nausea and Vomiting in Panembahan Senopati General Hospital in Bantul
Cornelia D.Y Nekada, Eva Ernawati, Tia Amestiasih (Indonesia) ........................................... 10

O-02 The Influence Of Early Breastfeeding Initiation On Postpartum Mother’s Breast Milk Production In Lismarini Independent Midwifery Practice Palembang
Indah Rahmadaniah, Lusi Meliani (Indonesia) ........................................................................... 18

O-03 Maternal Characteristics and Low Birth Weight
Tri Budi Winarsh, Hesty Widyasih, Margono (Indonesia) ......................................................... 22

O-04 Relationship of Obesity Early Pregnancy With Preeclampsia In RSUD Sleman 2016
Della Eprilian Sari, Dyah Noviawati Setya, Margono (Indonesia) ........................................... 30

O-05 The Effectiveness of Nipple Stimulation By Providing Supplementary Food to Succesfull Breastfeeding Back (Relactation) To The Breastfeeding Mothers In Southern Tangerang 2016
Isroni Astuti (Indonesia) ........................................................................................................ 35

O-06 Factors Related to Breast Cancer Among Women in Yogyakarta City Public Hospital, Indonesia
Tia Arsittasari, Dwiana Estiwidani, Nanik Setiyawati (Indonesia) ........................................... 43

O-07 The Effectiveness of Health Education Through Smartphone and Booklet on Knowledge and Attitude of Adolescence Reproductive Health
Puspa Sari, Kusnandi Rusmil, Arief S. Kartasasmita, Farid, Tati Latifah Erawati Rajab, Deni K. Sunjaya, Tina Dewi Judistiani (Indonesia) ......................................................... 51

O-08 Physical Activities and Snack Consumptions of Obese Adolescents In Bantul, Yogyakarta
Mellia Silvy Irdianty (Indonesia) .................................................................................................. 60

O-09 The Correlation Education About Health Reproductive and Knowledge and Attitude of Health Reproductive of Adolescent
Kusbaryanto, Hatasari (Indonesia) .............................................................................................. 68

O-10 The Relationship Between Knowledge, Attitudes, Actions Related to The Clean and Healthy Behavior and Nutritional Status with Diarrhea Events In Islamic Boarding School
Sinta Mukti Permatasari, Ayu Rahadiyanti, Fathimahi (Indonesia) ........................................... 74

O-11 Factors Associated with Exclusive Breastfeeding among Working Mothers in Yogyakarta City, Indonesia
Sri Yunita, Munica Rita Hernayanti, Niken Meilani (Indonesia) ............................................... 79

O-12 Characteristics of Sexually Transmitted Infections In Polyclinic dr. Sardjito Hospital Yogyakarta
Atika Karunia Zulfa, Jenita Doli Tine Donsu, Sugeng (Indonesia) ........................................... 86
O-13 Factors That Influences of People Living With HIV/AIDS (PLWHA) in VCT Division of General Hospital Waluyo Jati Kraksaan District Probolinggo
Cicilia Windiyaniingsih, Iis Hanifah (Indonesia) ................................................................. 95

O-14 Advanced of Sarang Semut Infusion (Myrmecodia Pendens Merr & Perry) as Decreased Blood’s Uric Acid in Male Rats of Wistar Strain
Agus Suprijono, Ariani Hesti (Indonesia) ............................................................................. 102

O-15 The Meaning and Role of Spirituality in HIV/AIDS Patients
Agus Prasetyo, Sodikin, Widyoningsih (Indonesia) ............................................................ 107

O-16 Therapeutic Communications Reduce The Patient’s Anxiety of Pre Operation Patients

FACTORS THAT INFLUENCE PEOPLE LIVING WITH HIV / AIDS (PLWHA) IN VCT DIVISION OF GENERAL HOSPITAL WALUYO JATI KRAKSAAN DISTRICT PROBOLINGGO

Cicilia Windiyaningisih*, Iis Hanifah
Jakarta Respati University, Jakarta, Indonesia
Email: sisilwindil@gmail.com

ABSTRACT

HIV / AIDS have some symptoms that impair the system immune. HIV / AIDS became an international problem with morbidity and mortality are still high. Based on the Ditjen PP & PL, Kemenkes RI, 2014 reported 15,534 new HIV cases and 1,700 new AIDS cases. The discovery of ARV (anti-retroviral) encourage a revolution in the care of people living with HIV in the developed world. Although antiretroviral treatment can reduce the risk of death, but the death of people living with HIV still persist. This study aims to analyze and explain the effect of treatment on survival. Quantitative research methods to design a retrospective cohort study, a sample of 209 people living with HIV who received antiretroviral treatment in 2013 and 2015 in hospitals Waluyo Jati, Probolinggo, East Java. Secondary Treatment, Adherence, Stage, Age, Sex, Occupation, Education, Marriage status, Opportunistic Infection, CD4 collection using medical record in poly VCT, univariate analysis using frequency distribution, bivariate with log rank, Kaplan Meier, multivariate cox regression. The results showed that the variables associated with survival of ODHA treatment, adherence to treatment, clinical stage, opportunistic infection and CD4 cell count, adherence is the dominant factor with HR 4.638, 95% CI 1.267 to 3.908, p value 0.000, R² 9.6%, average days obedient 900 days; disobedient 599 days, treatment combinations and no combination HR 2.225, 95% CI 1.267 to 3.908, p value 0.005, R² 31.2%, the mean survival day combination of 712 days, not 869 days combinations; HR 0.463 CD4 count, 95% CI 0.152 to 1.390, the p value 0.170, R² 8.6%, the average CD4 >350 as many as 932 days, CD4 <350 794 days. Conclusion ODHA dutifully taking the drug had a fivefold higher risk for long survival with a contribution of 10%.

Keywords: Survival Of People Living With HIV, CD4, Adherence, Treatment

INTRODUCTION

HIV/AIDS cases year to year was increased based on WHO Data year 2014 and the number of death amount 34 millions (Directorate General of D&C & EH, Ministry of Health R.I.2014)¹. In Indonesia the number district affected of HIV/AIDs amount 386 districts. The cumulative number of HIV / AIDS cases in East Java Province in 2014 was 24,932 cases and 49.52% in category AIDS. In 2015 the cumulative number of HIV / AIDS was 23,924 cases and 4.04% died. Year 2015 East Java Province was second position of higher number of HIV/AIDS.¹

Based on data at GENERAL HOSPITAL Walugo Jati Kraksaan Probolinggo, in year 2012, then people living with HIV / AIDS amounted to 68 people of whom 17.6% died. In the year 2013 amounted to 84 that 12% of them died. Prevalence of HIV / AIDS cases in Probolinggo in 2014 amounted to 21.5% of death, and in year 2015 has increased people with HIV / AIDS died to become 20%. The survival of HIV / AIDS was influenced by several factors such as adherence treatment, age, occupation, opportunistic infectious diseases, work status and others in this Hospital have not data survival people living with HIV/AIDS.

Data from 8 researchs, the result of survival people living with HIV / AIDS...
different various as like Octavianus\(^2\) result of research fourth stage of HIV/AID have not longer live; lower education very fast death three times compare high education\(^3\); divorced high risk of death fourth time compare with not divorced.

METHODS

This research was quantitative approach, study design was a retrospective cohort. The study was conducted retrospectively by following subjects to examine events that have occurred since people with HIV / AIDS were diagnosed with HIV / AIDS. The samples used in this study were all people living with HIV who perform treatment at General Hospital Waluyo Jati Kraksaan that inclusive the criteria of 209 Respondents. The research instrument uses checklist, data editing, coding, data entry and clearing, analysis by univariate, bivariate and multivariate. (Hastono S, and Sabri L.2010\(^4,5,6\).

</table>

Based on above analysis result of life table and Kaplan meier seen survival of PLWHA in General Hospital Waluyo Jati Kraksaan that survive (sensor) mostly in patient with not use combination treatment 82.5%. The result of statistic with Log Rank test obtained pvalue = 0.000 by using α = 0.05, meaning there was a significant
difference of proportion so that there was influence between treatment not combination and combination to survival of PLWHA. Based on the results of life table analysis and Kaplan meier seen survival of people living with HIV in General Hospital Waluyo Jati Kraksaan was still alive (sensor) mostly in PLWHA adherent in the treatment 87.6%. The result of statistic with Log Rank test obtained p value = 0.000 by using α = 0.05, meaning there was a significant difference of proportion so there was influence between obedient with disobedient in treatment to survival. Based on the results of life table analysis and Kaplan meier seen survival of people living with HIV in General Hospital Waluyo Jati Kraksaan was still alive (sensor) mostly in PLWHA stage 1 was 81.4%. The result of statistic with Log Rank test got p value = 0.001 by using α = 0.001, meaning there was difference of significant proportion so that there is influence between stage 1 with stage 2, 3 and 4 on survival.

Based on life table analysis and Kaplan meier seen survival of PLWHA in General Hospital Waluyo Jati Kraksaan was still alive (sensor) mostly in old PLWHA (<25 years) 76.6%. The result of statistic with Log Rank test obtained p value = 0.904 by using α = 0.05, meaning there is no difference of significant proportion so there was no influence between young age and old age to survival. Based on the results of life table analysis and Kaplan meier seen survival of people living with HIV in General Hospital Waluyo Jati Kraksaan was still alive (censorship) in the most PLWHA Male 78.6%. The result of statistic with Log Rank test got p value = 0.015 by using α = 0.005, meaning there is no difference of significant proportion so that there is no influence between female gender with male gender to survival.

Based on the results of life table analysis and Kaplan meier seen survival of people living with HIV in General Hospital Waluyo Jati Kraksaan is still alive (sensor) mostly in PLWHA working 78.8%. The result of statistic with Log Rank test got p value = 0.304 by using α = 0.05, meaning there is no difference of significant proportion so there was no influence between working with not work to survival. Based on the results of life table analysis and Kaplan meier seen survival of people living with HIV in General Hospital Waluyo Jati Kraksaan was still alive (censorship) most in unmarried people with 76.9%. The result of statistic with Log Rank test obtained p value = 0.979 by using α = 0.05, meaning there is no difference of significant proportion so that there was no influence between unpaired PLWHA with married PLWHA to survival.

Based on the results of life table analysis and Kaplan meier seen survival of people living with HIV in General Hospital Waluyo Jati Kraksaan was still alive (sensor) mostly on high-educated PLHA that was 76.7%. The result of statistic with Log Rank test obtained p value = 0.599 by using α = 0.05, meaning there is no difference of significant proportion so that there was no influence between high level of education with low level of education to survival.

Based on the results of life table analysis and Kaplan meier seen survival of PLWHA in General Hospital Waluyo Jati Kraksaan is still alive (sensor) mostly in PLWHA that there was no IO (opportunistic infection) 85.2%. The result of statistic with Log Rank test obtained p value = 0.000 by using α = 0.05, meaning there was a significant difference of proportion so that there was influence between PLWHA that no IO with PLWHA existing IO to survival. Based on above analysis result of life table and Kaplan meier seen survival of PLWHA in General Hospital Waluyo Jati Kraksaan still live (sensor) mostly in PLWHA CD4≥350 cell / mm ³ that was 92.3%. Number of statistic result with Rank Log test got p value = 0.002 by using α = 0.05, meaning there was difference of significant proportion so that there is influence between CD4 cell count≥ 350 cell / mm ³ with CD4 ≤ 350 cell / mm ³ to survival.

The result of the analysis with the last model shows that the dominant factor with the survival of PLWHA was adherence. PLWHA who were adherent to treatment have a fivefold risk for longer survival (900 days), the probability was 31.2%. Treatment affects the survival of people living with HIV. Non-combined treatments had more than twice the risk of surviving longer compared to combination treatment with a contribution of 9.6%. CD4 cell counts≥ 350 cells / mm$^3$ will decrease of death 45%, CD4 cell count contribution to PLWHA survival of 8.6%$^7,8,9$.}

**DISCUSSION**

Dominant Factors Associated With the survival of People Living with HIV / AIDS (PLWHA) At Waluyo Jati Kraksaan Probolinggo Hospital Year 2013-2015 analysis with the last model shows the dominant factor of survival PLWHA was Adherence of Treatment. PLWHA who adhered to their treatment have a fivefold risk for longer survival (900 days), the probability was 31.2%. Treatment affects the survival of people living with HIV. No Combination treatment was more than twice as likely to survive longer compared to combination treatment with a 9.6% contribution to this study, similar with research by Sri, U. 2015, Octavian 2014 study of treatment had an effect on survival of PLHIV. CD4 cell counts≥ 350 cells / mm$^3$ will decrease of death 45%, CD4 cell count contribution to PLHIV survival of 8.6%$^{10,11,12}$. One of the main factors that can reduce the mortality rate of HIV / AIDS patients was adherence to ARVs$^{10,13,14}$. Adherence to therapy was a condition in which patients adhered to treatment on a self-conscious, not just they obey the doctor's orders. This was important because it was expected to further improve the level of treatment adherence. Adherence should always be monitored and evaluated regularly at each visit. The failure of antiretroviral therapy was often caused by non-adherence of patients taking antiretrovirals. Adherence was recognized as an important factor in the success of therapy in HIV / AIDS patients, where there was a significant relationship between treatment adherence to HIV suppression, decreased resistance, increased CD4 cell count, increased survival and improved quality of life. To achieve optimal viral suppression levels, at least 95% of all ARV doses should be taken$^9$. Conclusions in this study, Treatment adherence greatly affects the survival of people living with HIV and was supported by the regularity of taking medication, so that opportunistic infections can be suppressed and will increase the CD4 count so that it can prevent to an advanced stage.
CONCLUSION
1. Description of survival of people living with HIV / AIDS (PLWHA), life (sensor) 75.6%, event (death) 24.4%. The mean survival of 827 days of PLWHA, the longest living sensor (980 days).
2. Factors that affect the survival of people with HIV / AIDS (PLWHA) are medication, adherence, Stadium, Opticunistic Infection and CD4 count.
3. The dominant factor in this study is compliance. The value of HR = 4.638, meaning that PLHIV who obedient treatment has a fivefold chance compared to non-adherence for longer survival (900 days), the probability was 31.2%.

SUGGESTION
General Hospital Waluyo Jati Kraksaan: It was expected to pay attention to the documentation system in order to add data on factors that may affect survival, among other types of treatment, medication adherence, stage, age, marital status, occupation, education level, baseline CD4 cell count, transmission risk factors, occupational status, and opportunistic infections. Health workers in the VCT Clinic more attention to the type of treatment given to the patient and it was relationship with survival. It needs to be directed, planned, and continuous extension to PLWHA to raise awareness to always obtain the latest knowledge and information about survival related treatment. Need to improve the effectiveness of drug drinking companion (PMO) because patients who routinely take the drug the chance of death occurrence in people with HIV / AIDS is lower. It was also necessary to monitor CD4 cell counts to be always high. In cooperation with the installation of nutrition in health promotion efforts to people living with HIV, good nutrition will make the human immune system increases. Need to increase the role of VCT counselors, counselors can be done maximally before the patient was diagnosed with HIV. Once a patient has been diagnosed with HIV it is necessary to have a deeper counseling in order to accept his situation and be able to sustain his life. In addition, to achieve the level of cohesion of PLWHA in taking medication of ARVs needed support from family, friends and VCT officers and internal factors of PLWHA such as self-motivation stay alive and do good living activities.
