ABSTRAK

Latar belakang: AKI merupakan salah satu indikator untuk melihat kesejahteraan negara. Untuk menurunkan AKI program *safe motherhood* terdapat empat pilar yang salah satunya asuhan antenatal yang mencakup K4. Kehamilan berisiko dipengaruhi salah satunya usia ibu saat hamil menentukan keadaan fisik ibu, emosional, maupun psikologi, pengalaman ibu hamil berdasarkan usia pun juga mempengaruhi memeriksakan kehamilannya apabila memiliki faktor risiko.

Tujuan Penelitian: Mengetahui hubungan usia ibu hamil dengan kunjungan *antenatal care* K4 di Puskesmas Panggang II Gunungkidul.

Metode Penelitian: Penelitian ini adalah penelitian observasional analitik dengan desain *cross sectional*, dilaksanakan bulan Agustus 2019-April 2020. Jumlah sampel pada penelitian ini yaitu 90 ibu hamil ditahun 2018 yang sudah melahirkan di wilayah Puskesmas Panggang II. Teknik sampling menggunakan *simple random sampling* dengan menggunakan *lottre teqchnique*. Variabel dalam penelitian ini adalah usia ibu hamil dan kunjungan ANC K4 yang diperoleh dengan data sekunder menggunakan instrumen berupa format pengumpulan data. Analisis data menggunakan uji *chi-square*.

Hasil Penelitian: Terdapat hubungan antara variabel usia ibu hamil dengan kunjungan ANC K4. Hasil analisis bivariat variabel usia ibu hamil dengan kunjungan ANC K4 memiliki signifikansi (p=0,048). Umur ibu berisiko kemungkinan tidak melakukan kunjungan ANC K4 2,7 kali (PR=2,7).

Kesimpulan: Terdapat hubungan usia ibu hamil dengan kunjungan ANC K4.

Kata Kunci: usia ibu hamil, kunjungan ANC
