INTISARI

Toilet Puskesmas adalah toilet yang digunakan oleh pasien, karyawan, dan pengunjung di puskesmas. Puskesmas Kalasan pada tahun 2021 memiliki 21 unit toilet yang tersebar di Gedung Lama, Gedung Rawat Inap, Unit Gawat Darurat, dan Poli Batuk Pilek. Berdasarkan hasil studi pendahuluan diketahui bahwa terdapat beberapa permasalahan terkait toilet puskesmas seperti kebersihan toilet yang kurang memadai, fasilitas yang kurang mendukung, dan masalah pemisahan toilet antara laki-laki dan perempuan. Tujuan penelitian ini adalah untuk mengetahui gambaran sanitasi toilet di Puskesmas Kalasan tahun 2021. Metode penelitian yang digunakan adalah penelitian deskriptif. Teknik pengambilan sampel menggunakan total sampling. Sampel yang digunakan adalah 14 toilet yang masih aktif digunakan saat masa pandemi Covid-19. Hasil penelitian menunjukkan 71% toilet Memenuhi Syarat konstruksi bangunan, 50% toilet Memenuhi Syarat kelengkapan, 86% toilet Memenuhi Syarat fasilitas sanitasi, 71% toilet memiliki sanitasi yang Laik Sehat, 43% pengawasan kebersihan toilet dalam Kategori Baik, dan dari 10 pertanyaan yang diajukan untuk petugas kebersihan semuanya menjawab selalu dengan persentase 100%. Kesimpulan dari penelitian ini adalah sanitasi di Puskesmas Kalasan harus lebih diperhatikan terutama dalam masalah pengawasan kebersihan toilet. Saran bagi sanitarian di Puskesmas Kalasan diharapkan dapat mengefektifkan kembali pengisian form kebersihan toilet dan melakukannya 2x dalam sehari.

ABSTRACT

Public health center toilets are toilets used by patients, employees, and visitors at the Public health center. Kalasan Puskesmas in 2021 has 21 toilets scattered in the Old Building, Inpatient Building, UGD, and Coli Cough Colds. Based on the results of the preliminary study, it is known that there are several problems related to public health center toilets such as inadequate toilet hygiene, unsupportive facilities, and the problem of separating toilets between men and women. The purpose of this study was to determine the description of toilet sanitation at Kalasan Public Health Center in 2021. The research method used was descriptive research. The sampling technique used total sampling. The sample used to be 14 toilets that were still actively used during the Covid-19 pandemic. The results showed that 71% of toilets meet the requirements for building construction, 50% of toilets meet the requirements for completeness, 86% of the toilets meet the requirements of sanitation facilities, 71% of toilets have a health-friendly sanitation, 43% of toilet hygiene supervision are in the Good Category, and of the 10 questions asked all of them answered always with a percentage of 100%. The conclusion of this research is that sanitation in Kalasan Health Center should be given more attention, especially in the problem of monitoring the hygiene of the toilet. Suggestions for sanitarians at the Kalasan Health Center are expected to make it more effective to fill in the toilet hygiene form again and do it twice a day.
