Pemantauan tumbuh kembang anak bertujuan untuk mengetahui apakah tumbuh kembang anak berjalan normal atau tidak. Pemantauan ini biasanya dilakukan di Pos Pelayanan Terpadu (Posyandu) yang dilakukan oleh kader Posyandu. Oleh karena itu, diperlukan keterampilan kader Posyandu agar kader dapat menjalankan tugasnya dengan baik. Tujuannya untuk mengetahui kemampuan antropometri kader Posyandu dalam melakukan penimbangan balita berdasarkan Standar Operasional Prosedur di Desa Salam Kabupaten Magelang. Penelitian ini merupakan penelitian deskriptif observasional yang dilaksanakan pada bulan Januari 2021. Subjek penelitian ini adalah 32 kader Posyandu di Desa Salam yang tersebar pada 8 dari 15 Posyandu di Desa Salam. Pengumpulan data dilakukan melalui observasi langsung dengan menggunakan checklist berupa SOP penimbangan (timbangan dacin) yang kemudian dianalisis menggunakan persentase. Hasil penelitian menunjukkan bahwa terdapat 2 (6,25%) kader Pos Pelayanan Terpadu yang terampil menimbang dengan timbangan Dacin dan 30 (93,75%) kader lainnya tidak terampil menimbang dengan timbangan Dacin. Penyegaran kader atau pelatihan kader perlu ditingkatkan dari Puskesmas untuk seluruh kader posyandu dengan materi utama adalah SOP penimbangan.

Kata kunci : Keterampilan, kader, Posyandu , timbangan dacin

ABSTRACT

POSYANDU CADRES SKILLS IN IMPLEMENTING WEIGHING ACCORDING TO OPERATIONAL STANDARD WEIGHING PROCEDURES FOR CHILDREN IN SALAM AREA

Monitoring child development aims to determine whether the child's growth and development is running normally or not. This monitoring is usually carried out at Integrated Service Posts (Posyandu) which are carried out by Posyandu cadres. Therefore, the skills of posyandu cadres are needed so that cadres can carry out their duties properly. The aim is to determine the anthropometric ability of Posyandu cadres in weighing toddlers based on Standard Operating Procedures in Salam Village, Magelang Regency. This research is an observational descriptive study conducted in January 2021. The subjects of this study were 32 Posyandu cadres in Salam Village spread over 8 of 15 Posyandu in Salam Village. The data was collected through direct observation using a checklist in the form of a weighing SOP (Dacin scales) which was then analyzed using a percentage. The results showed that there were 2 (6.25%) cadres of Integrated Service Posts who were skilled at weighing with Dacin's scales and 30 (93.75%) other cadres who were not skilled at weighing with Dacin's scales. Refresher cadres or cadre training need to be improved from the Puskesmas for all posyandu cadres with the main material being weighing SOP.
