ABSTRACT

Background: Easily received information about immunization provides support for families, one of which is fathers in increasing knowledge and behavior to play a role in improving children's health. Father's behavior and father's trust with health services can also affect immunization status.

Objective: To determine the relationship between father's knowledge and support with basic immunization compliance at the Kedaton Primary Clinic Bantul Yogyakarta 2021.

Methods: This research is a type of correlative analytic research with a quantitative approach. The population in this study is data from December 2020, which amounted to 79 people with a total sample of 45 people. The research variables are knowledge, paternal support and basic immunization compliance. This study uses the Chi-Square test.

Results: Most of the respondents in this study were fathers aged 26-35 years, most of the respondents' last education was high school. Most of the respondents' occupations are private employees, the type of immunization for children is mostly Measles/MR. The majority of father's knowledge is in good category, most of father's support is less supportive and has compliance in carrying out basic immunization. There is a relationship between father's knowledge about immunization with basic immunization compliance at the Kedaton Primary Clinic, Bantul Yogyakarta in 2021 ($P = 0.000$) and there is a relationship between father's support and basic immunization compliance at the Kedaton Primary Clinic Bantul Yogyakarta in 2021 ($P = 0.034$).

Conclusion: There is a relationship between father's knowledge and support with basic immunization compliance at the Kedaton Primary Clinic Bantul Yogyakarta 2021

Keywords: Knowledge, Father's Support, Basic Immunization Compliance

HUBUNGAN PENGETAHUAN DAN DUKUNGAN AYAH DENGAN KEPATUHAN IMUNISASI DASAR DI KLINIK PRATAMA KEDATON BANTUL YOGYAKARTA 2021

ABSTRAK

Latar Belakang: Informasi yang mudah diterima tentang imunisasi memberikan daya dukung bagi keluarga, salah satunya ayah dalam meningkatkan pengetahuan dan perilaku untuk ikut berperan meningkatkan kesehatan anak. Perilaku ayah dan kepercayaan ayah dengan pelayanan kesehatan juga dapat mempengaruhi status imunisasi.

Tujuan: Mengetahui hubungan pengetahuan dan dukungan ayah dengan kepatuhan imunisasi dasar di Klinik Pratama Kedaton Bantul Yogyakarta 2021.

Metode: Penelitian merupakan jenis penelitian *analitik korelatif* dengan pendekatan *kuantitatif*. Populasi dalam penelitian ini yaitu data dari bulan Desember 2020 yang berjumlah 79 orang dengan jumlah sampel sebanyak 45 orang. Variabel penelitian yaitu pengetahuan, dukungan ayah dan kepatuhan imunisasi dasar. Penelitian ini menggunakan uji *Chi-Square*.

Hasil: Responden penelitian ini sebagian besar adalah Ayah yang berusia 26-35 tahun, pendidikan terakhir responden sebagian besar SMA. Sebagian besar pekerjaan responden adalah karyawan swasta, jenis imunisasi anak sebagian besar Campak/MR. Pengetahuan Ayah mayoritas kategori baik, dukungan Ayah sebagian besar kurang mendukung dan memiliki kepatuhan dalam melakukan imunisasi dasar. Ada hubungan pengetahuan ayah tentang imunisasi dengan kepatuhan imunisasi dasar di Klinik Pratama Kedaton Bantul Yogyakarta tahun 2021 ($P=0,000$) dan ada hubungan dukungan ayah dengan kepatuhan imunisasi dasar di Klinik Pratama Kedaton Bantul Yogyakarta tahun 2021 ($P=0,034$).

Kesimpulan: Ada hubungan pengetahuan dan dukungan ayah dengan kepatuhan imunisasi dasar di Klinik Pratama Kedaton Bantul Yogyakarta 2021

Kata kunci: Pengetahuan, Dukungan Ayah, Kepatuhan Imunisasi Dasar
