ABSTRACT

Background: Guidebook is important to increase knowledge and understanding of discharge planning implementation. Guidebooks that are not yet detailed need to be developed in accordance with the stages of implementation and documentation in the hospital medical record format.

Objective: The purpose of this study was to determine the effect of the use of a guidebook that had been developed on the implementation of discharge planning in the inpatient ward of the Nyi Ageng Serang Hospital.

Methods: This type of research is a Quasi experimental design (quasi-experimental) using Pretest-Posttest Control Group Design. Data analysis used univariate analysis and bivariate analysis with different/comparative tests to determine the difference/influence of each variable in each group.

Results: The results of this study are that there are differences in the implementation of discharge planning before and after being given a guide book in each group as indicated by the results of the different pretest/posttest test data on the implementation of the experimental group with a significance value of p-value 0.001 and the control group with a significance value of p-value 0.001.

Conclusion: The guidebook that has been developed in accordance with the hospital medical record format has an effect on the implementation of discharge planning in the inpatient room at Nyi Ageng Serang Hospital.

Keywords: discharge planning, guidebook, implementation, documentation

ABSTRAK

Latar Belakang: Buku panduan penting untuk menambah pengetahuan dan pemahaman terhadap pelaksanaan *discharge planning*. Buku panduan yang belum terperinci perlu dikembangkan sesuai dengan tahapan pelaksanaan dan pendokumentasiannya pada format rekam medik rumah sakit.

Tujuan: Tujuan dari penelitian ini adalah mengetahui pengaruh penggunaan buku panduan yang sudah dikembangkan terhadap pelaksanaan *discharge planning* di ruang rawat inap RSUD Nyi Ageng Serang..

Metode: Jenis penelitian ini adalah penelitian *Quasi experimental design* (eksperimen semu) menggunakan rancangan *Pretest-Posttest Control Group Design*. Analisis data menggunakan analisis univariat dan analisis bivariat dengan uji beda/komparasi untuk mengetahui perbedaan/pengaruh setiap variabel pada masing-masing kelompok.

Hasil : Ada perbedaan pelaksanaan *discharge planning* sebelum dan sesudah diberikan buku panduan pada masing-masing kelompok yang ditunjukkan dengan hasil uji beda *pretest/posttest* data pelaksanaan pada kelompok eksperimen dengan nilai signifikansi *p-value* 0,001 dan kelompok kontrol dengan nilai signifikansi *p-value* 0,001.

Kesimpulan : Buku panduan yang telah dikembangkan sesuai dengan format rekam medik rumah sakit berpengaruh terhadap pelaksanaan *discharge planning* di ruang rawat inap RSUD Nyi Ageng Serang.

Keywords: *discharge planning*, buku panduan, pelaksanaan, dokumentasi
