ABSTRACT

Background: Academic stress was a negative response experienced by final year students due to an academic burden that is too heavy, causing psychological and biological changes. One of the therapies that can reduce academic stress is Mandala Pattern Coloring Therapy which can relax individuals.

Objective: Knowing the effect of Mandala Pattern Coloring Therapy On Academic Stress in Final Grade Students of the Nursing Department.

Methods: This research was a Pre-Experimental Designs research with One-Group Pre-Post Test Design. The sampling technique used Proportionate Stratified Random Sampling. The sample used was a Final Year Student of the Nursing Department, totaling 83 respondents. The statistical test used Wilcoxon signed ranks test.

Results: This study showed that 67.5% of students experience mild stress and 32.5% experience moderate stress from the pre-test scores. After being treated using Mandala Pattern Coloring Therapy, all respondents experienced a change in stress levels to mild stress (100%). The statistical tests showed a *p.value* of 0.000 ($P < 0.05$).

Conclusion: Mandala pattern coloring therapy has an effect on academic stress in Final Grade Students of the Nursing Department in Health Polytechnic of the Ministry of Health in Yogyakarta.

Keywords: Academic Stress, Mandala pattern coloring therapy, Nursing Students.
