ABSTRACT

Background: *Schizoactive disorder is a chronic mental disorder in the form of psychotic disorders and mood disorders. This disease is characterized by the presence of symptoms of episodes of major mood disorders that occur together with schizophrenia such as hallucinations, delusions and speech disturbances .*

Objective: *to gain real experience in carrying out nursing care in patients with sensory perception disorders: auditory hallucinations using the nursing process method based on Evidence Based Practice.*

Methods: *This report uses a descriptive method or a description of a case in one patient who was treated at GRHASIA Yogyakarta Hospital.*

Results: *after conducting the assessment and data analysis, four nursing diagnoses were obtained, namely sensory perception disorders: auditory hallucinations, risk of violent behavior, and disobedience. The interventions carried out are controlling hallucinations by rebuking, preventing the risk of violent behavior and supporting treatment program compliance. Implementation is carried out based on an intervention for five days and an evaluation is carried out at the end of each implementation.*

Conclusion: *after the patient was given nursing care for five days, the results of sensory perception disturbances were: auditory hallucinations were resolved, the risk of violent behavior was reduced reduced and support for treatment program compliance was partially resolved.*

Keywords: *Nursing Care, Schizoaffective, Auditory Hallucinations*

ABSTRAK

Latar Belakang: Gangguan skizoaktif merupakan gangguan mental kronis berupa gangguan psikotik dan gangguan mood. Penyakit ini ditandai dengan adanya gejala episode gangguan mood mayor yang terjadi bersamaan dengan skizofrenia seperti halusinasi, waham dan kekacauan berbicara. **Tujuan:** untuk memperoleh pengalaman nyata dalam melaksanakan asuhan keperawatan pada pasien gangguan persepsi sensori : halusinasi pendengaran menggunakan metode proses keperawatan berdasarkan *Evidence Based Practice*. **Metode:** Laporan ini menggunakan metode deskriptif atau gambaran suatu kasus pada satu pasien yang dirawat di RSJ GRHASIA DIY. **Hasil:** setelah dilakukan pengkajian dan analisa data didapatkan empat diagnosa keperawatan yaitu gangguna persepsi sensori : halusinasi pendengaran, resiko perilaku kekerasan dan ketidakpatuhan. Intervensi yang dilakukan yaitu mengontrol halusinasi dengan cara menghardik, pencegahan resiko perilaku kekerasan dan dukungan kepatuhan program pengobatan. Implementasi dilakukan berdasarkan intervensi selama lima hari dan evaluasi dilaksanakan setiap akhir melakukan implementasi. **Kesimpulan:** setelah pasien diberikan tindakan asuhan keperawatan selama lima hari didapatkan hasil gangguan persepsi sensori : halusinasi pendengaran teratasi, resiko perilaku kekerasan berkurang dan dukungan kepatuhan program pengobatan teratasi sebagian.
