ABSTRACT

Background: Cancer is a disease that can affect almost any organ or tissue in the body. It is one of the leading causes of death worldwide, with breast cancer being the largest contributor to annual mortality. Breast cancer is a type of cancer that occurs when malignant cells develop within breast tissue. In Indonesia, the highest incidence rate of breast cancer is found in the Special Region of Yogyakarta Province, with 4.86 cases per 1,000 population.

Objective: This study aims to describe the level of knowledge and attitudes of women of reproductive age regarding breast self-examination (breast self-examination) at Banguntapan I Community Health Center, Bantul.

Methods: This research uses a descriptive method with a cross-sectional study design. The study subjects were women of reproductive age (15–49 years) at Banguntapan I Community Health Center. The research was conducted in June 2025 with a total of 45 respondents. Univariate data analysis was performed using percentages.

Results: The results showed that women of reproductive age with good knowledge were mostly aged 20–35 years (84%), had higher education (91%), were employed (80%), and obtained information from electronic media (71%). Meanwhile, women with a positive attitude were mostly aged 20–35 years (68%), had higher education (64%), were employed (60%), and received information from health workers (57%).

Conclusion: Most women of reproductive age at Banguntapan I Community Health Center have good knowledge and a positive attitude toward breast self-examination (breast self-examination).

Keywords: Knowledge, Attitude, Breast Self-Examination, Women of Childbearing Age

GAMBARAN TINGKAT PENGETAHUAN DAN SIKAP WANITA USIA SUBUR TENTANG PEMERIKSAAN PAYUDARA SENDIRI (SADARI) DI PUSKESMAS BANGUNTAPAN I BANTUL
